Autonomous Loader is an intelligent construction machine equipped with AI, environmental perception, and self-decision capabilities. By integrating multi-sensor fusion (LiDAR/cameras/radar), high-precision positioning (GNSS/RTK), and industrial-grade control systems, it performs full-cycle operations (loading/hauling/dumping) without human intervention through real-time mapping, path planning, and obstacle avoidance. Key benefits include enhanced safety (for hazardous/remote sites), reduced labor costs, and optimized productivity (24/7 operation), widely applied in mining, port logistics, infrastructure projects, and emergency rescue. Its architecture typically involves 5G remote monitoring, V2X connectivity, and cloud-based fleet management, marking a transformative shift in smart construction machinery.

United States market for Autonomous Loader is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
