The global Autonomous Logistics UGV market size is predicted to grow from US\$ 20113 million in 2025 to US\$ 50120 million in 2032; it is expected to grow at a CAGR of 14.0% from 2026 to 2032.

In 2025, global Autonomous Logistics UGV production reached approximately 1 million units, with an average global market price of around US\$ 20000 per unit. Annual production capacity is 1.2 million units. Gross Profit Margin: 39%. Autonomous Logistics UGV (Unmanned Ground Vehicle) refers to ground-based robotic platforms designed to transport goods, supplies, or equipment automatically without human intervention. The industry chain of Autonomous Logistics UGVs begins with upstream suppliers of key components such as chassis and mobility systems, motors, batteries, sensors (LiDAR, cameras, ultrasonic), navigation modules, and communication hardware. Midstream manufacturers integrate these components with autonomous navigation software, fleet management systems, and load-handling mechanisms to produce fully functional logistics UGV platforms. Downstream, system integrators, distributors, and service providers deliver these vehicles to warehouses, factories, hospitals, ports, and e-commerce fulfillment centers, where they perform automated material transport, inventory movement, and intra-facility logistics operations, improving efficiency, safety, and labor utilization. Autonomous logistics UGVs are poised to revolutionize the way goods are moved and managed within warehouses, factories, and ports.
