The global Autonomous Mining Truck Solution market size is predicted to grow from US\$ 650 million in 2025 to US\$ 6318 million in 2032; it is expected to grow at a CAGR of 39.0% from 2026 to 2032.

An Autonomous Mining Truck Solution is a closed-site autonomy stack for mine haul trucks (and sometimes underground trucks) operating within a defined ODD, combining onboard perception-planning-control and high-precision localization with fleet supervision/traffic management and remote monitoring to automate haul cycles between loading and dumping points, improving safety, consistency, and utilization while integrating with mine operations systems.

The value chain typically spans vehicle hardware (drive-by-wire, sensors, GNSS-RTK/INS, automotive compute with redundancy), autonomy software (perception-prediction-planning-control, functional safety/cybersecurity, simulation/OTA), and site-level systems (control center, fleet supervision/traffic management, integration with mine dispatch/FMS) plus long-term O&M.
