autonomy. The AMR relies on autonomous navigation where no wires, tape, GPS or other navigation markers are required. Its laser guidance system assures precise navigation, obstacle avoidance and human safety. The drive-around mapping with laptop adjustments enables fast and easy route updates and additions. The demands placed on the functionality of autonomous robotic systems are significantly higher compared to conventional industrial robots. The aim is that mobile systems operate autonomously in unknown and dynamic environments to fulfill their assigned tasks. For this purpose, it is essential to explore and model the environment in a suitable way. The information gathered by sensors has to be combined to allow for an accurate positioning. In addition, the perceived surroundings have to be consolidated in an exact map representation. Having acquired this knowledge, the robot is able to plan an optimal collision-free path to a given goal and to perform complex handling tasks.

The key players are Geekplus Technology, Mobile Industrial Robots, Swisslog (KUKA), Aethon Inc., Omron Adept, 6 River Systems, ForwardX Robotics, Clearpath Robotics, Fetch Robotics and so on. Among them, Geekplus Technology and Mobile Industrial Robots are the leader of autonomous mobile robots market. The top 2 players account for more than 47% market share in Korea, Japan and China.

In 2019, LiDAR+Vision Based AMRs accounted for a share of about 77% in the Korea,

Japan and China Autonomous Mobile Robotic Machine market.
