The global Autonomous Mobile Robots (AMR) market size is predicted to grow from US\$ 2969 million in 2025 to US\$ 12360 million in 2031; it is expected to grow at a CAGR of 26.8% from 2025 to 2031.

An autonomous mobile robot (AMR) is a robot that performs behaviors or tasks with a high degree of autonomy. The AMR relies on autonomous navigation where no wires, tape, GPS or other navigation markers are required. Its laser guidance system assures precise navigation, obstacle avoidance and human safety. The drive-around mapping with laptop adjustments enables fast and easy route updates and additions. The demands placed on the functionality of autonomous robotic systems are significantly higher compared to conventional industrial robots. The aim is that mobile systems operate autonomously in unknown and dynamic environments to fulfill their assigned tasks. For this purpose, it is essential to explore and model the environment in a suitable way. The information gathered by sensors has to be combined to allow for an accurate positioning. In addition, the perceived surroundings have to be consolidated in an exact map representation. Having acquired this knowledge, the robot is able to plan an optimal collision-free path to a given goal and to perform complex handling tasks.

North America is the largest region of Autonomous Mobile Robots, with a market share about 40%, followed by Europe and China, etc. Swisslog (KUKA), Omron Adept, Geekplus Technology and Mobile Industrial Robots are the top 4 manufacturers of industry, and they had about 50% combined market share.
