The global Autonomous Mobile Welding Robot market size is predicted to grow from US\$ 23.7 million in 2025 to US\$ 36.3 million in 2031; it is expected to grow at a CAGR of 7.4% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

An autonomous mobile welding robot is a self-navigating robotic system designed to perform welding tasks without direct human control. It integrates mobility (typically via wheels or tracks), sensors (such as LiDAR and cameras), and artificial intelligence to map environments, plan paths, and carry out precise welding operations in dynamic or complex industrial settings. These robots are widely used in construction, shipbuilding, pipeline maintenance, and manufacturing, where they improve efficiency, consistency, and safety by operating in hazardous or hard-to-reach areas. Their autonomy allows them to adapt to changing environments and reduce the need for extensive human supervision or fixed infrastructure.
