Autonomous Orchard Robot refers to intelligent agricultural robots designed for automated operations in orchard environments. These robots integrate autonomous navigation, machine vision, sensors, artificial intelligence, and robotic control technologies to perform tasks such as fruit monitoring, spraying, harvesting assistance, weed management, and orchard inspection. They are mainly used in fruit plantations, smart agriculture systems, and precision farming applications. The product scope includes autonomous orchard operation robots and specialized agricultural robotic platforms, excluding traditional agricultural machinery without autonomous functions.

The industry chain of Autonomous Orchard Robot includes upstream components, midstream robot manufacturing, and downstream agricultural applications. Upstream suppliers provide sensors, cameras, chips, batteries, motors, navigation modules, and mechanical components. Midstream manufacturers conduct robot design, system integration, software development, and performance testing. Downstream applications
