The global Autonomous Ride-hailing Vehicles market size is predicted to grow from US\$ 1987 million in 2025 to US\$ 7033 million in 2032; it is expected to grow at a CAGR of 19.7% from 2026 to 2032.

Autonomous ride-hailing vehicles refer to shared mobility vehicles that utilize technologies such as artificial intelligence, sensors, radar, and high-definition maps to provide passenger pick-up and drop-off services without human intervention. They combine the instant booking and route optimization systems of ride-hailing platforms, enabling vehicles to autonomously plan routes, avoid obstacles, and obey traffic rules based on passenger needs, providing a safe and convenient travel experience. Compared to traditional ride-hailing services, autonomous ride-hailing vehicles reduce reliance on human drivers and continuously optimize operational efficiency with the support of data and algorithms.

Autonomous ride-hailing vehicles have broad development prospects, mainly reflected in reducing travel costs, improving road safety, and alleviating traffic congestion. With the continuous maturation of artificial intelligence, 5G communication, vehicle-to-everything (V2X) technology, and high-precision map technology, the reliability and economy of autonomous vehicles will continue to improve, and large-scale operation is expected to be achieved in the next few years. Furthermore, autonomous ride-hailing vehicles may also drive the upgrading of shared mobility models, forming a more intelligent, environmentally friendly, and efficient urban transportation system, becoming an important component of smart cities.
