The global Autonomous Robotaxi Service market size is predicted to grow from US$ 108 million in 2025 to US$ 237 million in 2032; it is expected to grow at a CAGR of 12.1% from 2026 to 2032.

Autonomous Robotaxi Service refers to a transportation model in which self-driving vehicles, equipped with advanced sensors, AI-based perception, and autonomous driving software, operate as shared, on-demand taxis without a human driver. These services are typically accessed via mobile apps, similar to ride-hailing platforms, allowing passengers to request a trip and be transported by a fully autonomous vehicle. In 2024, global Autonomous Robotaxi Service sales revenue reached approximately 83.5 million. The Autonomous Robotaxi Service industry involves a multi-layered value chain encompassing technology development, vehicle manufacturing, software and AI systems, and end-user deployment. At the upstream, it includes suppliers of LiDAR, radar, cameras, sensors, high-performance computing chips (such as AI accelerators), and autonomous driving software platforms that provide perception, planning, and control capabilities. The midstream consists of autonomous vehicle integrators, OEMs, and fleet operators who assemble the vehicle hardware, integrate autonomous driving stacks, and manage fleet operations. Downstream, the service is delivered to end-users through ride-hailing apps or mobility-as-a-service (MaaS) platforms, providing on-demand, fully autonomous taxi services. Additionally, the ecosystem relies on cloud infrastructure, mapping and localization data providers, regulatory compliance, insurance partners, and after-sales support to ensure safe and efficient operation of robotaxi fleets.

United States market for Autonomous Robotaxi Service is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
