Autonomous Robots in Factories refer to intelligent robotic systems deployed in manufacturing plants, warehouses, and internal industrial logistics environments, capable of independently performing path planning, obstacle avoidance, material handling, picking, inspection, and collaborative operations through sensors, vision systems, AI algorithms, and autonomous navigation technologies (such as AMR, AGV, and SLAM). Their core feature is the ability to operate without continuous human intervention while integrating with industrial systems such as MES, WMS, and ERP, making them essential components of Industry 4.0 and smart manufacturing.

The upstream of the Autonomous Robots in Factories industry mainly includes suppliers of core components and technologies such as servo motors, reducers, LiDAR, industrial cameras, controllers, battery systems, navigation modules, and AI algorithm platforms. The midstream consists of robot manufacturers and system integrators responsible for robot body development, software integration, and factory deployment. The downstream mainly covers automotive manufacturing, electronics manufacturing, semiconductors, food and beverage, pharmaceuticals, warehousing logistics, and heavy industries, where internal logistics automation and flexible manufacturing are the major demand drivers.

United States market for Autonomous Robots in Factories is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
