The global Autonomous Soil Sampling Robot market size is predicted to grow from US$ 188 million in 2025 to US$ 358 million in 2032; it is expected to grow at a CAGR of 9.9% from 2026 to 2032.

A autonomous soil sampling robot is an intelligent robotic system capable of independently completing the entire process—from mission planning, environmental perception, autonomous navigation, precise positioning, mechanical operation (soil drilling/sampling), sample handling (packaging, labeling), to quality assessment and data upload—without direct human intervention. It represents the highest level of automation in soil sampling technology. Its core value lies in completely liberating humans from repetitive, labor-intensive, and even hazardous field sampling work. By eliminating human operational variability, it ensures ultra-high spatial accuracy, temporal consistency, and process traceability of sampling data, providing an indisputable primary data foundation for precision agriculture, environmental monitoring, and geological research. By 2025, the production volume of autonomous soil sampling robot will reach approximately 1,600 units, with an average global market price of approximately $120,000 per unit.

United States market for Autonomous Soil Sampling Robot is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Autonomous Soil Sampling Robot is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
