The report requires updating with new data and is sent in 48 hours after order is placed.

According to our LPI (LP Information) latest study, the global Autonomous Sweeper market size was valued at US\$ million in 2022. With growing demand in downstream market, the Autonomous Sweeper is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Autonomous Sweeper market. Autonomous Sweeper are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Autonomous Sweeper. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Autonomous Sweeper market.

Autonomous sweeper is a type of urban sanitation vehicle.

Autonomous sweepers mainly use self-driving sweepers to replace traditional sanitation vehicles to achieve road cleaning on open roads or closed roads.

At present, the price of Autonomous sweepers is on the high side, and compared with traditional manpower, the price advantage is not obvious. In the future, with the localization and large-scale production of key components (such as lidar), the cost of Autonomous sweepers is expected to decrease. At the same time, with the commercialization of L4 level autonomous driving technology, labor costs will further decline, and Autonomous sweepers are expected to be promoted and used on a large

scale.
