The global Avian Influenza Vaccines market size is predicted to grow from US\$ 1076 million in 2025 to US\$ 1501 million in 2031; it is expected to grow at a CAGR of 5.7% from 2025 to 2031.

Avian influenza refers to the disease caused by infection with avian (bird) influenza (flu) Type A viruses. These viruses occur naturally among wild aquatic birds worldwide and can infect domestic poultry and other bird and animal species. Avian flu viruses do not normally infect humans. However, sporadic human infections with avian flu viruses have occurred. Avian Influenza Vaccines is a kind of vaccine used to prevent infection caused by Avian Influenza bacteria.

The avian influenza vaccines market is driven by the increasing prevalence of avian flu outbreaks, which pose significant threats to both poultry industries and public health. As global poultry consumption rises, the need to protect livestock from highly pathogenic avian influenza strains is critical to maintaining food security and preventing economic losses. Governments and regulatory bodies are increasingly focused on preventing zoonotic transmission, leading to the widespread use of vaccines in poultry farms. Additionally, ongoing advancements in vaccine development, such as more effective and faster-acting vaccines, are further driving market growth.

A major challenge in the avian influenza vaccines market is the high cost and logistical difficulties of mass vaccination programs, especially in large-scale poultry farms or regions with limited veterinary infrastructure. The need for continuous monitoring and re-vaccination due to the evolving nature of avian influenza strains adds to the complexity

and cost of vaccine deployment. Additionally, regulatory barriers and varying standards for vaccine approval across different countries can hinder the global distribution of vaccines, limiting market expansion in certain regions.

Global Avian Influenza Vaccines key players include Boehringer Ingelheim, CAHIC, DHN, HVRI, etc. Global top five manufacturers hold a share over 70%. China is the largest market, with a share about 45%. In terms of product, Type H5 is the largest segment, with a share over 70%. And in terms of application, the largest application is Chicken, followed by Duck and Goose, etc.
