Actuators in aircraft play a vital role for flight and control; often their operation ensures the safety of the aircraft and every passenger on board.

In the past, airplanes have been fitted with hydraulic actuators. Airline companies are beginning to fit airplanes with electric actuators, because of better technology and more reliability. These heavy-duty linear actuators are manufactured to stand up to high pressure, peaking sometimes above 5,000psi. Because they are very close to the ground at high speeds, they must be built incredibly strong so they are not damaged by debris that is kicked up by wheels.

North America is expected to exhibit high growth over the forecast period. North-
