In 2025, the global production capacity of Aviation Carbon Fiber Prepregs was approximately 40.86 k tons.

Aviation Carbon Fiber Prepregs are composite intermediate materials made by impregnating aerospace-qualified carbon fiber fabrics or tapes with controlled resin systems. They are designed for high strength-to-weight ratio, fatigue resistance, thermal stability, process consistency and strict traceability. The product is used in aircraft structures, rotor blades, fairings, interior structural parts, UAV airframes, space components and high-performance aviation tooling. The market includes unidirectional and woven prepregs for aviation and aerospace applications, but excludes ordinary industrial prepregs, dry carbon fabrics and finished composite parts.

The industry chain includes PAN-based carbon fiber, epoxy resin, toughenners, curing agents, release films, backing papers, solvents, resin films and prepreg coating equipment. Midstream production covers fiber spreading, resin formulation, impregnation, thickness control, volatile control, quality testing, cold storage packaging and traceability management. Downstream demand comes from aircraft manufacturing,
