Abstracts

The global Aviation Cleaning Agent market size is predicted to grow from US$ 95.44 million in 2025 to US$ 133 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

In 2024, global production of aviation cleaning agents reached 24,800 tons, with an average selling price of US$3,760.45 per ton.

Aviation cleaning agents are specialized chemical preparations designed specifically for the surfaces, components, and internal systems of aircraft. They are based on organic solvents (such as kerosene, chlorinated hydrocarbons, and aromatics), water-based agents (containing surfactants, disinfectants, and corrosion inhibitors), or synthetic agents (such as n-propane bromide precision cleaners). They dissolve and remove contaminants such as oil, carbon deposits, and hydraulic oil through the principle of "like dissolves like" or the solubilizing effect of surfactants. Aviation cleaning agents must meet requirements such as high flash point, low toxicity, and easy biodegradability.

The gross profit margin for aviation cleaning agents is 18.29%, with a gross profit of US$687.79. Single-line production capacity is 1300 tons/year.

The upstream of aviation cleaning agents consists of basic chemical raw materials and specialized additives (surfactants, solvents, pH adjusters, biodegradable agents, corrosion inhibitors, etc.), represented by companies such as BASF, Dow Chemical, Solvay, Clariant, and Evonik. The downstream sector comprises airlines, airport ground services, aviation maintenance (MRO) companies, and aircraft manufacturers, with applications including aircraft exterior surface cleaning, engine interior cleaning, cabin interior disinfection, and runway stain removal.
