Aviation coating, also referred to as aircraft coating or aerospace coating, is a protective coating applied to the exterior and interior surfaces of aircraft to enhance their durability, performance, and appearance. These coatings are specifically designed to meet the stringent requirements and standards of the aviation industry.

Aviation coatings include UV-resistant ingredients to protect the aircraft's external surfaces and structures from fading, discoloration, and damage caused by prolonged exposure to sunlight. Aviation coatings undergo rigorous testing and certification processes to meet industry standards, including flammability, toxicological, and VOC (volatile organic compounds) requirements. These coatings are typically applied in controlled environments by professionals trained in aircraft painting techniques to ensure proper adhesion, thickness, and finish quality. Aviation coatings need to meet the specific requirements and regulations set forth by aviation authorities, such as the Federal Aviation Administration (FAA) in the United States and the European Union Aviation
