The global Aviation Power Battery market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Aviation power batteries can increase the efficiency of the aircraft's electric propulsion system to 2-3 times higher than that of traditional fuel engines, which can effectively improve system efficiency, reduce carbon emissions, reduce life cycle costs, and reduce aircraft noise.

In October 2021, the aviation industry released a commitment called "Net Zero Flight 2050". The signatories agreed to promote what they called the third era of air transport - global connectivity to be zero carbon. The air transport sector has set out a long-term climate commitment that "global civil aviation operations will achieve net zero carbon emissions by 2050, and the aviation industry sees the value and potential of sustainable aviation fuel and electric aircraft powered by high-energy batteries. Chinese government The "National Comprehensive Three-dimensional Transportation Network Planning Outline" has been released, proposing to establish a three-dimensional transportation system, and initially establish a modern high-quality comprehensive three-dimensional transportation network by 2035. Electrification in the aviation field has become a new field of transportation that countries are exploring and competing for. All major battery manufacturers are scrambling to invest more in technology, hoping to occupy a leading position in this track.
