An aviation windsock is a device used at airports and airfields to indicate the direction and approximate speed of the wind specifically for aviation purposes. It functions similarly to the standard windsock described earlier, but it is specifically designed and placed in locations relevant to aircraft operations. The aviation windsock provides valuable wind information to pilots during takeoff, landing, and taxiing, allowing them to assess the wind's impact on their aircraft and make informed decisions accordingly. It helps pilots choose the appropriate runway, adjust flight controls, and ensure safer and more efficient operations in the aviation industry.
