The global AWE Diaphragm market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The AWE (alkaline water electrolysis) diaphragm is a key component used in the hydrogen production process of alkaline electrolysis of water. It is a diaphragm that conducts OH⁻ and blocks gas (prevents the mixing of hydrogen and oxygen to produce explosive gas), and plays the role of isolation and catalysis effect.

The functions of the AWE (alkaline water electrolysis) membrane include: preventing hydrogen and oxygen from mixing, providing ion conduction channels, and catalyzing reactions. The use of alkaline water electrolysis hydrogen production separators can realize an efficient and safe water electrolysis hydrogen production process, and is widely used in the field of hydrogen energy.
