The global AWG Wafer market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

AWG wafer refers to the manufacturing material and shape of Arrayed Waveguide Grating (AWG for short). An AWG wafer is a substrate for optical devices, usually made of silicon-based materials, with a series of fine waveguide grating structures. The manufacturing process of AWG wafers mainly includes the following steps: 1. Substrate preparation: Select appropriate silicon-based materials and prepare the substrate. Silicon wafers are usually used as the substrate. 2. Fabrication of waveguide gratings: use photolithography and chemical etching techniques on the substrate to produce a series of fine waveguide grating structures. 3. Grating modulation: Through grating modulation technology, the waveguide grating is precisely modulated to achieve the required optical performance. 4. Surface treatment: The surface of the AWG wafer is treated to improve optical performance and stability.
