Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

An axial air-breathing engine is a jet engine that emits a jet of hot exhaust gases formed from air that is forced into the engine by several stages of centrifugal, axial or ram compression, which is then heated and expanded through a nozzle. They are typically gas turbine engines. The majority of the mass flow through a ducted jet engine is provided by air taken from outside of the engine and heated internally, using energy stored in the form of fuel.

The global market for Axial Air-Breathing Engines is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Axial Air-Breathing Engines market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.
