The global Axial Ball Bearings market size is predicted to grow from US\$ 17160 million in 2025 to US\$ 23950 million in 2031; it is expected to grow at a CAGR of 5.7% from 2025 to 2031.

Axial ball bearings include thrust ball bearings, thrust cylindrical roller bearings, thrust needle roller bearings, thrust tapered roller bearings and thrust spherical roller bearings.

Rising production of automobiles, rising demand from emerging countries, and rising demand for technology-enhanced solutions are driving the growth of the global automotive industry bearings market. In recent years, the demand for higher performance, less maintenance and longer life bearings has increased. Ball bearings have spherical rolling elements for smaller loads, while roller bearings have oval rolling elements for larger loads. Linear bearings are used for linear motion along an axis and can also be rotated. Pre-assembled bearings are sets of bearings that are pre-assembled in frames and attached to frames and other structures used to support shaft ends and other structures. The demand for electric vehicles is primarily driven by rising vehicle sales and rising usage of these vehicles. An average passenger car has 35 bearings, depending on the vehicle model and the extensive use of robotics. The latest technical upgrade of the dual-clutch automatic transmission required the introduction of three more bearings, two main shafts for the second transmission, and one on the dual-clutch. Furthermore, the development of high capacity bearings coupled with superior lubrication performance will drive the growth of the bearings market. Bearings are important in powering multiple rotating elements and maintaining the load characteristics of various mechanical equipment. Increasing demand for specialized systems to meet the needs of specific industries, such as aircraft support systems, gas meters, and various industries are driving the growth of the ball bearing market, who are

interested in components, fixtures, and machines designed with extremely low tolerances, And remain stable under harsh working conditions. Rising demand for ball bearings owing to surge in usage of customized bearings is expected to drive market revenue growth. The rise of digitalization and smart technologies embedded in bearings is driving the growth of the market. Digitization is one of the key ways to access wireless options in verticals. Digitization of bearings is realized by changing the lubrication state and vibration mode of the bearings. Analyze these measurements to take corrective action when potential problems arise. The combination of sensors and bearings has been developed into smart bearings. For industrial operations, sensors conveniently measure orientation, temperature, speed, and vibration of these bearings. Furthermore, the advent of the Internet of Things (IoT) and real-time artificial intelligence (AI) facilitates end users to easily monitor the shape of their bearings at any time.
