Axial Extensometers?also known as axial strain gauges are mainly used to measure the axial deformation of metals, plastics, ceramics and composites. Including the stretching and compression of the material, the two bending fixtures make the system insensitive to vibration, allowing high frequency vibration operations. The test part is good in integrity, and the instrument can be fixed to the sample to be tested in a few seconds with one hand. The test part can be moved as needed, and the test head can be fixed with a spring or rubber.

United States market for Axial Extensometers is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
