Axial Lead Type NTC Thermistor (Axial Lead Type NTC Thermistor) is an electronic component with a negative temperature coefficient, that is, its resistance value decreases as the temperature increases. The main structural feature of this thermistor is the axial lead design, with the resistor element located between two parallel metal leads, which has good conductivity and mechanical stability. It is small in size, fast in response speed, and high in precision, and is suitable for a variety of temperature detection and control scenarios. Axial Lead Type NTC Thermistor is usually made of oxide metal ceramic material, which provides excellent thermal performance and long-term reliability after sintering and packaging.
