Axicon superlens is a flat lens that uses metasurface technology to focus light. Its design combines the focusing characteristics of an axicon with the lightweight and high-resolution imaging advantages of a superlens. By artificially controlling the optical properties (such as amplitude, phase, and polarization) on the metasurface, the axicon superlens can achieve a focusing effect similar to that of a traditional axicon, while providing a smaller volume, lighter weight, and higher imaging quality.

The global Axicon Metalens market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
