The global Azithromycin Tablets market size is predicted to grow from US\$ 2027 million in 2025 to US\$ 2521 million in 2032; it is expected to grow at a CAGR of 3.3% from 2026 to 2032.

In 2024, global production of azithromycin tablets reached approximately 9.863 billion tablets, with an average selling price of around USD 0.21 per tablet. Azithromycin tablets are oral solid dosage forms containing azithromycin, a macrolide antibiotic that exerts bacteriostatic effects by inhibiting bacterial protein synthesis. They are widely prescribed for respiratory tract infections, skin and soft tissue infections, genitourinary infections, and certain sexually transmitted diseases. Compared with other antibiotics in the same class, azithromycin offers advantages such as shorter treatment courses, broad tissue distribution, high bioavailability, and good patient compliance, making it a long-established cornerstone drug in global anti-infective therapy.

Currently, the azithromycin tablet market is in a highly mature stage, with demand primarily driven by routine clinical use and stable consumption within primary healthcare systems. The market structure is dominated by generic competition. Market conditions indicate continued high utilization in emerging and developing regions, while in developed markets, prescriptions are increasingly regulated by antimicrobial stewardship and rational drug-use policies. In terms of development trends, the industry is steadily shifting toward high-quality generics, supply reliability, and regulatory compliance, with consistency evaluation, enhanced quality standards, and supply chain security becoming key competitive factors. Market perspectives suggest that although azithromycin tablets are unlikely to achieve rapid growth again, their essential role in anti-infective therapy ensures resilient long-term demand, resulting in a market characterized by low growth, high stability, and strong regulatory oversight.
