According to World Bank statistics, the global birth rate in 2021 was about 1.7%. Although the population growth rate had slowed down, with the development of the world economy and the increase of per capita disposable income of residents, the spending power is growing. Therefore, there is still a large room for development in the baby products industry. According to the National Bureau of Statistics, China's birth rate in 2022 was 6.77%, and the birth

population was 9.56 million. The huge population size has brewed a market demand with huge potential, and the children's consumption market has risen rapidly. Chinese families spend a lot on childcare, with the average cost of childcare ranking second in the world. The survey data released by China Research Center for Children's Industry shows that in 80% of families in China, children's expenditures account for 30% to 50% of household expenditures, and the average annual consumption of children in families is ?17,000 to 25,500. According to data from the Yuwa Population Research, the national average cost of raising a child (the cost of raising a child to the age of 18) is ?485,218. From the perspective of specific stages, the largest proportion is the cost of raising children aged 6-14, accounting for about 45%. The cost during pregnancy, the cost of childbirth and confinement, and the cost of raising babies aged 0-2 accounted for 2.06%, 2.09% and 13.33% separately.
