A baby walking harness is a supportive device designed to assist infants and toddlers as they learn to walk independently. It typically consists of adjustable straps and handles that allow caregivers to support the child's torso and provide stability while allowing the child to practice walking movements. The harness is worn by the child, with the straps adjusted to fit snugly but comfortably around their torso. The caregiver can then hold onto the handles or straps to guide and support the child as they take steps. Baby walking harnesses are often used as a transitional aid between crawling and walking, helping children build confidence and coordination as they develop their walking skills. These harnesses are sometimes preferred over traditional baby walkers because they offer more control and safety for both the child and the caregiver.

The global Baby Walking Harness market size is projected to grow from US\$ 161 million in 2024 to US\$ 209 million in 2030; it is expected to grow at a CAGR of 4.5% from 2024 to 2030.
