The global Baccatin III market size is predicted to grow from US\$ 391 million in 2025 to US\$ 526 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

Baccatin III is a natural diterpenoid compound derived from the yew tree. It is the most direct and important 'core precursor' for the synthesis of the well-known anticancer drugs paclitaxel and docetaxel. Its inherent immunomodulatory and antitumor activity also makes it a promising innovative drug. Baccatin III is a white or pale yellow crystalline solid. It exhibits good resistance to acids, alkalis, and oils. It is soluble in organic solvents such as ethanol and dimethylformamide at room temperature.

Baccatin III is mainly derived from plants of the Taxaceae family and the Taxus genus. Baccatin III is commonly used in the adhesive, coating, and plastics industries. It can be used as an adhesive to bond materials such as paper, wood, and metal. In coatings, it provides excellent adhesion and weather resistance, increasing the hardness and abrasion resistance of the coating. Baccatin III can also be used to manufacture plastic products, such as molded parts and appliance housings.

In 2025, global sales of Baccatin III are projected to reach 20.5 kg, with a production capacity of approximately 25.6 kg, an average selling price of US\$19,500/g, and an average gross profit margin of 42%-48%.

United States market for Baccatin III is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Baccatin III is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
