Abstracts

Simply put, void fill packaging fills up the excess space—the void—around a product in a box. This provides adequate cushioning and protection during shipping and storage.

The most obvious reason that anybody would need to use void fill is to protect items en route and during transit. By filling empty space or cushioning around your item you are automatically reducing the impact on item. This is not just necessary for fragile items but for most items as nobody doesn't want customers to be dissatisfied with the way that the product has been handled.
