A backpack laser cleaning machine is a portable and compact device equipped with laser cleaning technology, designed to remove contaminants, coatings, rust, and other unwanted materials from various surfaces. Unlike traditional cleaning methods that rely on abrasive techniques or chemical solvents, backpack laser cleaning machines utilize high-energy laser beams to ablate and vaporize surface contaminants without damaging the underlying substrate. These machines typically consist of a lightweight backpack unit containing the laser source, optics, and control system, along with a handheld laser cleaning gun connected by a flexible optical fiber. The operator can easily carry the backpack unit and maneuver the cleaning gun to target specific areas, making it suitable for on-site cleaning and maintenance tasks in diverse industries such as automotive, aerospace, construction, historical restoration, and manufacturing. Backpack laser cleaning machines offer advantages such as precision cleaning, minimal material waste, environmental friendliness, and the ability to access confined or hard-to-reach spaces, making them a versatile and efficient solution for a wide range of cleaning and surface preparation applications.

The global Backpack Laser Cleaning Machine market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
