The global Baggage Scanners market size is predicted to grow from US\$ 1927 million in 2025 to US\$ 3109 million in 2031; it is expected to grow at a CAGR of 8.3% from 2025 to 2031.

Baggage Scanners use this technology. Once the luggage is inside, one side of the scanner releases X-rays. These X-rays pass through the bag and some of the energy of the X-rays is absorbed by the various objects in the bag, whereas the empty spaces do not block the X-rays and the waves go through without any change in intensity. These waves then hit the first plate-like detector. Before hitting the second detector, the material between the two detectors blocks the low-energy waves, so that only the high-energy waves hit the second plate. The outputs of these plates are compared, which helps us know the materials of the various objects inside the bag.

Global Baggage Scanners key players include Smiths Detection, OSI Systems, L-3, etc. Global top three manufacturers hold a share about 45%.

North America is the largest market, with a share over 35%, followed by Europe and Asia-Pacific, both have a share about 65 percent.

In terms of product, Channel Scanning Machine is the largest segment, with a share over 80%. And in terms of application, the largest application is Railway & Subway Traffic, followed by Airport Traffic.
