Baker's yeast is mainly used as a vital ingredient in the bakery market. Bread, brown bread, rye bread, wholemeal bread, buns, white bread, and various other bakery products are in high demand across the globe. These dominant factors are expected to drive the market growth. As consumer awareness of the benefits of organic food grows, so too does retail sales of organic food. Baker's yeast is gaining popularity as a leavening agent in bakery products around the world, as it can be stored at room temperature for long periods of time without losing any of its properties. One of the major factors expected to drive the growth of the baker's yeast market is the expansion of high-quality baker's yeast to increase its use as a leavening agent in bakery products. The demand for packaged bakery products such as cakes is expected to be high in the coming years due to the increasing preference of consumers, mainly children around the world, to eat packaged cakes as snacks. The consumption trend of pizza has been at the highest level over the past few years and the development of pizza-centric concepts is present across channels, which is expected to bring numerous opportunities for the growth of the baker's yeast market over the forecast period. Sales of bakery products are driven by continued demand for additive-free ranges and the impact of inflation on retail costs, further increasing the demand for baker's yeast in bakery product applications.
