Baking Pan Liner is a heat-resistant, non-stick sheet or mat placed on the surface of a baking tray or pan to provide a protective barrier between the food and the baking surface. Designed to prevent sticking and facilitate even baking, pan liners help extend the life of bakeware, reduce the need for grease or oil, and simplify post-baking cleanup. These liners are made from various materials, including parchment paper, silicone-coated fiberglass, PTFE (Teflon), and aluminum foil, each offering different levels of durability, temperature resistance, and reusability. Baking pan liners are used in both home and commercial kitchens to support consistent baking performance and ensure food safety. They help prevent food from burning or over-browning on the bottom and sides, and some variants also offer moisture retention or airflow enhancement. In professional environments, such as bakeries and food manufacturing facilities, pan liners are essential for maintaining hygiene standards and production efficiency.
