The global Baking Temperature Controller market size is predicted to grow from US\$ 158 million in 2025 to US\$ 245 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

In 2025, global sales of baking temperature controllers reached 1.865 million units, with an average selling price of \$86.50 per unit; the industry's total production capacity stood at approximately 2.6 million units annually, and gross margins ranged from 32% to 40%. These electronic control instruments are designed to detect, display, control, and intelligently regulate internal temperatures in baking equipment—such as ovens, proofing cabinets, tunnel ovens, and rotary ovens—utilizing temperature sensors, control chips, and display modules to ensure precise monitoring and automatic control. They help users maintain stable baking environments, thereby enhancing food quality consistency and production efficiency. Product types include mechanical, electronic, and digital smart controllers, as well as networked control systems; smart digital controllers, in particular, are becoming a key focus for upgrading commercial baking equipment due to their high precision, multi-parameter control capabilities, and data logging functions. Upstream components and raw materials include temperature sensors (thermocouples, RTDs, NTC thermistors), microcontroller chips, PCBs, LCD screens, relays, power modules, plastic housings, and metal structural parts. Major global production hubs are located in China, Europe, Japan, and North America. Downstream demand stems primarily from commercial baking equipment manufacturers, food processing enterprises, central kitchens, the hospitality and catering sectors, and the home baking market, with industrial and commercial baking equipment accounting for the bulk of demand. Looking ahead, driven by the rising need for smart baking equipment, automated production lines, food quality traceability, and energy-efficient controls, baking temperature controllers are evolving toward higher precision, multi-channel

control, wireless connectivity, and AI-assisted regulation. Regarding demand and business opportunities, the growth of global baked goods consumption, the expansion of bakery chains, and the digital upgrading of traditional equipment will continue to drive market growth, with significant opportunities for replacement and upgrades in the sectors of smart ovens, industrial tunnel ovens, and energy-efficient baking equipment.
