A Ball Float Level Transmitter is a type of level sensor used to measure the liquid level in tanks and vessels. It consists of a float, usually made of stainless steel or other non-corrosive material, attached to a metal rod or cable.

Float level transmitters are instruments used to measure and monitor liquid levels in various industrial and commercial applications. These devices operate on the principle of buoyancy, where the position of a floating ball changes with the liquid level, providing an indication or measurement of the level.Float level transmitter industry has seen advancements in technology, including the development of digital and wireless communication options, allowing for real-time data transmission and remote monitoring.The increasing adoption of automation and the Industry 4.0 paradigm has led to greater integration of ball float level transmitters into control systems and data networks, enabling predictive maintenance and improved operational efficiency.Emerging markets, particularly in Asia, have shown significant growth in the demand for level measurement instruments, driven by industrialization and infrastructure development.
