The global Ball Grid Array (BGA) Socket market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A ball grid array (BGA) socket is designed for mounting package boards that use a grid of solder balls, known as BGAs. Unlike the pin grid array (PGA) type, where lattice-shaped pins in a grid are inserted into a socket, BGA package boards are typically mounted by direct soldering. BGA sockets allow these boards to be mounted without soldering, making them easily removable.

The global Ball Grid Array (BGA) socket market is expected to witness significant growth in the coming years, driven by the increasing demand for high-performance electronic devices such as smartphones, tablets, and laptops. BGA sockets are widely used in these devices due to their compact size, high reliability, and superior electrical performance.

One of the key factors driving the growth of the BGA socket market is the increasing adoption of advanced technologies such as 5G, artificial intelligence, and Internet of Things (IoT). These technologies require high-speed and high-density interconnect solutions, which can be provided by BGA sockets. Additionally, the growing demand for miniaturization and higher functionality in electronic devices is also fueling the demand for BGA sockets.

In terms of regional analysis, Asia Pacific is expected to dominate the BGA socket market, owing to the presence of major electronics manufacturers in countries like China, Japan, and South Korea. These countries are known for their strong

manufacturing capabilities and technological advancements in the electronics industry. North America and Europe are also expected to witness significant growth in the BGA socket market, driven by the increasing adoption of advanced technologies in sectors such as automotive, aerospace, and defense.
