A ball milling service is a cutting method used in milling machines and NC (Numerical Control) machine tools. It employs a cutting tool with a rounded, ball-shaped endmill tip. This spherical tip is particularly suited for cutting complex 3D curved surfaces, including both convex and concave shapes. Ball milling excels in operations where other end milling techniques struggle, such as peripheral cutting on R surfaces and grooving. Unlike other methods, ball milling achieves higher precision and requires less labor when machining curved surfaces.
