A ball screw is a mechanical linear actuator that translates rotational motion to linear motion with little friction. A threaded shaft provides a helical raceway for ball bearings which act as a precision screw. As well as being able to apply or withstand high thrust loads, they can do so with minimum internal friction. They are made to close tolerances and are therefore suitable for use in situations in which high precision is necessary.

The global Ball Screws market size is projected to grow from US\$ 2044 million in 2024 to US\$ 2946 million in 2030; it is expected to grow at a CAGR of 6.3% from 2024 to 2030.
