Ballast Water Management System (BWMS) is an onboard marine treatment system designed to remove, neutralize, or inactivate invasive aquatic organisms and pathogens in ballast water before discharge, ensuring compliance with international maritime regulations such as the IMO Ballast Water Management Convention. Upstream, BWMS depends on filtration units, treatment technologies (UV, electrochlorination, ozonation, or chemical dosing), sensors, control systems, and marine-grade materials supplied by equipment and component manufacturers. Downstream, BWMS is installed on commercial vessels—including bulk carriers, tankers, container ships, and offshore vessels—where it enables environmentally compliant ballast operations, protects marine ecosystems, and supports global shipping operations under increasingly stringent environmental regulations.
