The global Balloon Grade Helium market size is predicted to grow from US$ 282 million in 2025 to US$ 471 million in 2032; it is expected to grow at a CAGR of 7.8% from 2026 to 2032.

Balloon Grade Helium refers to a colorless, odorless, non-toxic inert gas with high purity suitable for filling balloons. It has stable chemical properties and a density much smaller than air, about one-seventh of air, which can give balloons good floating properties.

Helium (chemical symbol He) is a colorless, odorless, non-toxic inert gas. It is the lightest gas in the universe except hydrogen. Balloon Grade Helium refers to high-quality helium with high purity suitable for filling balloons. Since the density of helium is much smaller than that of air (about one-seventh of air), it can easily float in the air after filling balloons. At the same time, helium has stable chemical properties, does not react with other elements or compounds, and exists in gaseous state at normal temperature and pressure, which makes it a safe choice for filling balloons.

United States market for Balloon Grade Helium is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Balloon Grade Helium is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
