A bandstop filter is a type of filter used in engineering and physics. The main idea behind it is to remove or block certain frequencies in the input signal while allowing other frequencies to pass through the filter unaffected. In general, band stop filters play an important role in increasing the efficiency of many applications including military, commercial and space. Applications such as military and commercial have a growing need for high-performance filters that block specific frequencies or ranges of signal frequencies used in surveillance, communications, navigation, and object recognition systems. Growing demand for smartphones and other portable communication devices is also driving the growth of the global band rejection filter market. Furthermore, the growth of this market can be attributed to the increasing demand for notch filters in military and commercial applications. In terms of type, notch filter is expected to hold the majority share of the band stop filter market during the forecast period. This can be attributed to the growing demand for notch filters in communication and radar applications.
