Capsule Filling Machine is a combination of machine, electricity and gas. It adopts microcomputer programmable controller, touch panel operation, frequency conversion speed regulation, equipped with electronic automatic counting device, which can automatically complete the positioning, separation, filling, locking, etc. of the capsule. Professional capsule filling machines or encapsulation machines are mechanical devices commonly used for industrial and pharmaceutical purposes. These machines are used to fill empty soft or hard gelatin capsules of various sizes with powders, granules, semi-solids or liquids substances containing active pharmaceutical ingredients or a mixture of active drug substances and excipients. This process of filling empty capsules with substances is termed encapsulation. In this report, professional capsule filling machine includes banding machines and sealing machines.

Global key players of professional capsule filling machine (banding and sealing machines) include Mettler Toledo, Syntegon, Sejong, Schaefer Technologies, etc. Global top five manufacturers hold a share over 35%. Europe is the largest producer of professional capsule filling machines.
