Banknote paper cotton pulp is a high-purity specialty fiber pulp made from long-staple or short-staple cotton fibers through processes such as selection, impurity removal, cooking, bleaching and refined beating. It is used for producing high-security banknote paper and specialty anti-counterfeiting paper. The material features high fiber strength, excellent durability, good dyeing and watermark-forming properties, and supports multilayer security structures such as security threads, watermarks and security fibers.

Upstream supply for banknote paper cotton pulp mainly includes high-quality cotton linter providers, bleaching chemicals (such as hydrogen peroxide and sodium hypochlorite), specialty pulping equipment and fiber purification technology. The cleanliness and fiber length directly affect paper strength and security-paper performance. Midstream companies conduct pulping, bleaching, refining and homogenization to produce high-purity pulp used for banknote paper, passport paper and other security papers. Downstream demand comes from banknote paper mills, national minting and printing authorities and high-security document paper manufacturers, influenced by currency replacement cycles, durability improvements and the expansion of high-security paper applications.
