The global Bar Type Static Neutralizations market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The ion wind rod (static elimination rod) can generate a large number of air masses with positive and negative charges, which can neutralize the charges on objects passing through its ion radiation area. When the surface of an object is negatively charged, it will attract the positive charges in the radiation area, and when the surface of an object is positively charged, it will attract the negative charges in the radiation area, thereby neutralizing the static electricity on the surface of the object and achieving the purpose of eliminating static electricity.
