Bare Metal Coronary Artery Stent is a stent without a coating or covering. It is a mesh-like tube of thin wire.

Unlike invasive procedures such as PCI, coronary angioplasty/stenting and coronary artery bypass surgery (CABS) are minimally invasive procedures because they do not require large incisions. The growing demand for these techniques is primarily due to their benefits such as less scarring, less pain, minimal surgical trauma, significantly shorter hospital stays, and earlier return to normal activities. Considering these advantages, more and more patients are undergoing minimally invasive surgery.
