Bare metal dedicated server solutions are end-to-end service packages that provide users with exclusive physical servers (no virtualization layer) and supporting technical services, tailored to meet specific business needs for performance, security, and control.

Bare metal dedicated server solutions differ from shared hosting or virtual private servers (VPS) in that each user gets full, exclusive access to a physical server's hardware resources. Key traits include:

- No resource sharing or virtualization overhead, ensuring consistent performance and low latency.
- Full control over hardware configurations, operating systems, and software deployments.
- Enhanced security, as isolation from other users eliminates risks associated with shared environments.
- Customizable scalability, allowing adjustments to CPU, memory, storage, and network based on business growth.
