A barge is a flat-bottomed base used for carrying a huge capacity of heavy goods through waterways. A single barge can carry goods with capacity of above 1,500 tons at once which is far more than that of railcars or trucks. Barge logistics transportation can be considered a cost-effective and high-capacity mode of transportation as compared to other modes of transport, such as road, rail, and air. Barges can support higher loads and ensure safety, particularly when it comes to transportation of large volumes of cargos.
