Barite is a mineral composed of barium sulfate (BaSO_4). It receives its name from the Greek word 'barys' which means 'heavy.' This name is in response to barite's high specific gravity, which is exceptional for a nonmetallic mineral. The high specific gravity of barite makes it suitable for a wide range of industrial, medical, and manufacturing uses. Barite also serves as the principal ore of barium.

Barite is an important mine resource, which is mainly used in drilling industry (Rig). Barite reserve is distributed in China, India and Morocco. China is a leading barite resource distribution region and barite production region. In China, barite resource is distributed in Guizhou, Guangxi and Yunnan province. China has many barite suppliers and market concentration is low. India own the second largest barite resource. In India, Andhra Pradesh Mineral Development is a leading company.

United States market for Barite Minerals is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
